

Dead Locks. Saves The Day.

## DEAD LOCKS

Escutcheon size:  
50mm dia

  
**SOBEET  
LOCKS**  
Safe & Sound

These small and unobtrusive locks pack quite a punch in bolstering your security. Used for additional security at the base or top of your door, a deadlock could save the day when out on a long weekend or vacation. These locks prevent an intruder from prying open a door with a wrench or rod. Dead Locks can be operated with a key on both sides; be keyed on one-side and operated with a thumb-turn on the other; can be keyed on one-side only.

For Offices and in Commercial centers, deadlocks work great on doors where lever handles become a hindrance eg. high-traffic entrances, rest-room areas etc. SOBEET deadlocks can be used on Glass doors with a top and bottom wood/aluminum rail.

## PANIC EXIT DEVICE

The Panic Exit Device [PED] enables easy and prompt escape in the case of a crisis or emergency. Its trouble-free, simple- to- operate technique requires you to merely push a bar across the door forcefully, the natural human response in an emergency. This activates and opens the lock on the emergency exit that generally leads you to the fire/emergency escape which is a stipulation/ specification for all modern constructions - residential or business. The PED works seamlessly with the SOBEET Mortise Lock.

The slick design blends with the aesthetics of any door and is suitable for Steel, Wooden and Aluminium Doors.

It can be fitted on doors of any width.

It operates on a Mortise Lock. It provides for fireman's keys which can be easily integrated with SOBEET's Master Key Systems.
